

PRODUCT SHOWCASE—Peeling feet? Summer is upon us.

Last month we touched upon our sweaty feet formula. A formula designed to act as an astringent to help shrink sweat glands and keep us from sliding in our shoes and coming home with wet socks. But...what about being more than just wet? What about the foot that has peeling skin. Tiny little blister like “puck” marks on the feet that peel upon touch. Or...what about that wet, itchy between the toes feeling we get from classic “athletes feet”? Many people suffer from this condition. In fact, statistics tell us that most people will develop athletes feet at least once in their lifetime.

FOOTLOGIX CAN HELP
Introduce your clients to
#7 Anti-fungal formula

- Clotrimazole—to treat the fungus
- NO moisture—the foot is wet enough
- Dermal Integration Technology for easy penetration
- 1X per day—results in less than 72 hours

CJ'S 2011
KNOWLEDGE CORNER

- ⇒ Athlete's foot is an infection of the feet caused by fungus. The medical term is tinea pedis
- ⇒ Ringworm—a skin infection caused by a fungus
- ⇒ Moccasin tinea exhibits on a moist foot as white peeling skin around the outside of the foot and heel

Before & after using #7
